

Full Stack Developer (Node JS, TypeScript, React)

Job Description

We are looking for Full-Stack Developers with solid experience in React, Nodejs, TypeScript, and Frontend technologies to build dashboards and User Interfaces for our SaaS products.

Skillset Summary: ReactJS, AngularJS, Javascript, TypeScript, NodeJs

About Cartrabbit

Cartrabbit is a software-as-a-Service (SaaS) product startup based in Coimbatore, building customer retention and lead generation tools for eCommerce businesses with over 50,000+ customers worldwide. An entirely modern platform that takes you to the world-class product development workflow that promisingly meets customer needs and success. Cartrabbit is committed to maintaining a safe and productive work environment, and you will be a part of an awesome SaaS product development team and incredible benefits that include:

Great learning environment

Flexible working hours

Opportunity to work in a Product company in a vertical B2B niche SaaS.

Roles and Responsibilities

- Create, scale, and manage RESTful APIs that can handle millions of requests
- Design and develop scalable systems using advanced concepts in NodeJS, TypeScript, Javascript and react. Should have a better understanding of deploying and working with AWS services.
- Design and develop the component architecture, integration, and deployment concepts (single and multi-tenant). Architect system, subsystem, and component; understands and communicates consequences of the design on the architecture.
- The ability to investigate and troubleshoot an issue with implementation can make sense of a situation and able to drive efforts to resolve the issues by engaging with all stakeholders
- Adhere and pay special attention to coding standards, best practices, and maintainability
- Identify and Implement Performance improvements and Optimizations
- Engage with Customers and stakeholders in all phases of the project life cycle – requirements gathering, solution design reviews, execution, and status reviews
- Deliver innovation in design and solutions leveraging the latest best practices in the area of expertise, evangelize across the team to adopt them, and continuously keep updated oneself on the latest technologies
- Performing technology/tools evaluation and software technical proof of concepts.

Skill/ Qualification

- Experience in NodeJS, TypeScript, React
- Excellent skills in MongoDB / DynamoDB and other NoSQL systems
- Experience in working with SQL databases like MySQL, PostgreSQL
- Required experience with REST APIs (ExpressJS), Server-side development using Node JS
- Required experience in designing large-scale systems from the ground up, collaborating with stakeholders to get necessary approvals, and driving implementation by applying engineering best practices in SDLC.
- Knowledge of multiple front-end languages and libraries (e.g. HTML/ CSS, JavaScript, XML, jQuery).
- Preferred to have experience using Git, JIRA, Docker, and Amazon Web Services (AWS) technologies
- Expert knowledge of databases, networking, security, privacy, and compliance for Web-based applications.
